QSHE

QUALITY, HEALTH, SAFETY & ENVIRONMENT

Overview

The company is justifiably proud of its achievements in health and safety through the development of our Integrated QSHE management system. The system is designed to enable line management to fulfil their roles in QSHE (Quality, Safety, Health, and Environmental) by making each and every person in our team accountable for their own and others health and safety. This creates an improved culture throughout the business from the behavioural changes in the attitude of our team towards QSHE.

We hold safety as a value, not a priority, because priorities change, values do not! The ultimate responsibility for QSHE lies with the Managing Director who ensures it is given equal priority with other major business issues. The implementation of the policy and the safety management system is a line management responsibility and will involve the participation of all employees within the company.

We continually review our QSHE strategies and constantly look for new innovative ideas to improve our management system. Objectives and targets are established annually and reviewed monthly to establish their status. Information is fed back into the company so all employees are aware, thus creating an environment built upon trust and respect, and whereby everyone is an equal partner in the company.

Technical Access Services is accredited to OHSAS 18001, the internationally recognised accreditation for occupational health and safety management systems. This accreditation demonstrates Technical Access Services commitment to health and safety and the wellbeing in the workplace.

QUALITY

The company have a full set of Quality policies and procedures, which are audited externally by Bureau Veritas to the latest ISO 9001 standard, and we are fully committed to continuous improvement to ensure we surpass the requirements where possible.

This registration demonstrates Technical Access Services commitment to monitor, control and improve our quality systems. In addition the standard also enhances our reputation across the marketplace, whilst creating a more efficient and effective business. This gives our customers / clients the confidence to place orders safe in the knowledge that Technical Access Services will not only meet but strive to exceed their expectations, through continued improvement of our processes and systems.

HEALTH AND SAFETY

OHSAS 18001 (Occupational Health and Safety Managements Systems) – Organisations worldwide recognise the need to control and improve health and safety systems and performance. Technical Access Services is no exception, we are committed to providing a safe and healthy environment for our employees by consistently identifying and controlling health and safety risks, and reducing the potential for accidents.

To achieve this accreditation we have put in place a comprehensive and effective Occupational Health and Safety Management System, which is continually assessed and improved to ensure all employees work in safe manner, by providing the correct and necessary tools to create a safe and healthy environment.

TALK ABOUT SAFETY

The majority of accidents within the workplace can be attributed to the 'human factor' meaning they are caused by a direct or indirect action from a person. Promoting safe behaviour at work is a critical part of the management of Health and Safety. Technical Access Services first introduced its behavioural safety / human performance program TAS (TAS stands for Talk About Safety) in December 2013.

The TAS behavioural safety programme involves workplace observations of all personnel identifying positive and negative behaviours with information being inputted into the TAS database for analysis. Trends of behaviours can then be determined and learning cascaded to all personnel within the company, with the outcome of learning from previous experience and therefore preventing similar behaviours.

TAS encourages everyone to make a deeper personal commitment to think and act safely, so our people return home safely each day and that those visiting or living near our places of work are not put at risk, by our acts or omissions.

Those employees identified working in a safe manner are praised for their positive attitude and monthly incentive awards are held across all sites. Two employees are selected for their continuous safe working during each year and they are crowned 'Safety Champions' and receive special awards.

Those employees identified working in an unsafe manner were corrected through the TAS process. We intervened and worked as a team to correct negative behaviour, thus preventing an accident / incident potentially occurring, ultimately making the workplace a safer one for everyone.

ENVIRONMENT

The company have a full set of environmental policies and procedures which are audited externally by Bureau Veritas to the latest ISO 14001 standard, and we are fully committed to continuous improvement to ensure we surpass the requirements where possible.

We have set ourselves targets and objectives which are monitored monthly to assess our progress. The company will endeavour to conduct its operations in an environmentally friendly manner, playing our part in making tomorrow a better place for everyone today.

The company will work with our clients, customers and suppliers in managing and reducing waste by promoting a culture to reduce, re-use and recycle.

Technical Access Services are continually improving our environmental performance, by identifying and assessing environmental aspects and taking the necessary controls to reduce our environmental impact. This leads to a reduction in waste and operating costs, and ensures we are compliant with environmental legislation.

ACCREDITATIONS

We are justifiably proud of the recognition we have achieved over the years from external bodies, thus demonstrating the robustness of our systems, the implementation of them by all employees throughout the company:

OHSAS 18001
ISO 9001
ISO 14001

These awards are testament to the commitment of all our staff to place health and safety high on their list of priorities.
